Experience

Nordstrom, Seattle, WA

Software Engineer 2 | March 2024 - Current

- Designed and built customer-facing experiences and large-scale services to improve product discovery across the Nordstrom website and iOS app, enabling high-impact marketing campaigns.
- Scaled sponsored product placements across Nordstrom's digital platforms through robust integrations, driving a 15% annual increase in visibility and revenue.
- Led technical discovery and solution design to monetize content assets across the Nordstrom ecosystem, aligning engineering initiatives with long-term business goals.
- Collaborated cross-functionally with marketing and data science teams to optimize ad targeting and content relevance using user behavior signals and re-ranking models, improving engagement and monetization.

Software Engineer | January 2022 – February 2024

- Developed applications with vendor integrations to display sponsored products across multiple page types and platforms, contributing approximately $1xxM in annual top-line revenue and supporting millions of monthly active customers.
- Implemented automated data pipelines to generate transactional data and ad campaign reports, enabling seamless cross-platform delivery, accurate attribution, and data-driven marketing optimization.
- Launched non-endemic offer experiences using third-party solutions across Nordstrom and Rack websites and iOS apps, contributing $xM in annual revenue.
- Analyzed system data and key performance metrics to proactively detect issues, reduce operational costs by 30%, and improve scalability during high-traffic events.

FreeLock Computing, Seattle, WA, January 2021 – December 2021

Software Development Engineer

- Designed and developed user-facing web sites utilizing Drupal and WordPress Content Management System, ensuring seamless navigation and enhanced user experiences.
- Utilized a customer-centric approach to thoroughly assess customer requirements, delivering cost-effective technical solutions within specified timeframes.
- Modified code of existing applications to correct errors, implemented new features and optimized software performance and scalability leveraging PHP and JavaScript languages.

Bellmont Cabinets Co., Sumner, WA, June 2019 – March 2020

Software Engineering Intern

- Analyzed shop-worker needs, designed, and developed four web applications using ASP.NET MVC framework, and languages including C#, HTML/CSS, and JavaScript for company's operations.
- Responsible for querying data in existing SQL databases utilized by data visualizations and tools.
- Contributed to various engineering documentation, and demonstrated a comprehensive understanding of software engineering best practices and project management with Jira Project Management software.

Education

Bachelor of Science (B.S.) in Computer Engineering

Seattle Pacific University, Seattle, WA

Technical Skills

Languages:	Node.js, React, Python, Java, JavaScript, TypeScript
Technologies:	AdTech, Amazon Web Services, Google Cloud Platform, Kubernetes, Kafka, Redis, NewRelic, Splunk, Optimizely, Git, SQL
AI Tools:	Claude Code, GitHub Copilot, Codex
Concepts:	System Design, CI/CD, Agentic AI, Multi-agent Orchestration, MCP
